

WattWise -- Electricity Bill Analysis

Bill Summary

Consumer Number	123456789012
Billing Month	July 2026
Units Consumed	370
Bill Amount	Rs. 33285.4
Change vs Previous	37.04% (increased)
Cost per Unit	Rs. 89.96
WattWise Energy Score	60/100 -- Average

Wattson's Analysis

This month, your household consumed 370 units, resulting in a bill of Rs 33,285.40. Your consumption has increased by 37.04% compared to last month.

This significant jump suggests that high-drain appliances-such as your AC or water heater-likely ran for extended periods, which typically dominate your total usage far more than short-term appliances.

Here are three ways to manage your costs:

- Target the "Big Three":** Focus on reducing the runtime of your AC, refrigerator, and water heater, as these have the biggest impact on your bill.
- Aim for a lower slab:** By reducing your overall consumption, you may drop into a lower tariff slab, which can lead to savings greater than just the cost of the units saved.
- Understand your bill:** Remember that your cost per unit (Rs 89.96) is higher than the base rate because it includes fixed charges and surcharges.

Your WattWise Energy Score is 60/100, indicating your consumption is currently average.

Note: The WattWise Energy Score is our own heuristic based on consumption trend and usage band -- it is not an official MSEDCL or government rating. Appliance estimates use rated wattage and typical duty-cycle factors, not a live meter reading.
